	XII Scientific notation (科學記號)	3
	XIII Characteristic and mantissa (首數與尾數)	3
	XIV Exponential growth (指數成長)	3

# 1 Exponent (指數) and Logarithm (對數)

#### I Euler's number (尤拉數)

$$e = \lim_{n \to \infty} \left( 1 + \frac{1}{n} \right)^n.$$

#### II Exponent (指數)

$$a^n := \begin{cases} \text{undefined}, & a = 0 \land n \in \mathbb{C} \land \Re(n) \leq 0, \\ 0, & a = 0 \land n \in \mathbb{C} \land \Re(n) > 0, \\ 1, & a \in \mathbb{C} \land a \neq 0 \land n = 0, \\ \prod_{i=1}^n a, & a \in \mathbb{C} \land n \in \mathbb{N}, \\ e^{\Re(n)} \cdot (\cos \Im(n) + i \sin \Im(n)), & a = e \land n \in \mathbb{C}, \\ |a|^n e^{in \arg(n)}, & a, n \in \mathbb{C} \land \neg (a = 0 \land \Re(n) \leq 0), \end{cases}$$

where

$$\arg(a) = \operatorname{atan2}\left(\frac{\mathfrak{F}(a)}{|a|}, \frac{\mathfrak{R}(a)}{|a|}\right)$$

is the principal value of the argument (輻角主值) of a, and a is called the base (底數) and n is called the exponent (指數).

#### III Logarithm (對數)

$$\log_a(z) := x \text{ s.t. } a^x = z, \quad a \in \mathbb{R}_{>0} \land a \neq 1 \land z \in \mathbb{C}_{\neq 0},$$

that is,

$$\log_a(z) := \begin{cases} \ln(\|z\|) + i \arg(z), & a = e \land z \in \mathbb{C}_{\neq 0} \\ \frac{\ln(z)}{\ln(a)}, & a \in \mathbb{R}_{>0} \land a \neq 1 \land z \in \mathbb{C}_{\neq 0}, \end{cases}$$

where a is called the base (底數) and b is called the argument (真數).

## IV Exponential law (指數律)

For all defined exponential terms:

$$a^{r} \cdot a^{s} = a^{r+s},$$

$$(a^{r})^{s} = a^{rs},$$

$$(a \cdot b)^{r} = a^{r} \cdot b^{r}.$$

#### V Logarithmic law (對數律)

For all defined logarithmic terms:

$$\begin{split} \log_a(r) + \log_a(s) &= \log_a(rs) \\ \log_a(r) - \log_a(s) &= \log_a\left(\frac{r}{s}\right) \\ \log_{a^m}(r^n) &= \frac{n}{m}\log_a(r) \\ \log_a(b) &= \frac{\log_c(b)}{\log_c a} \end{split}$$

## VI Common logarithm (常用對數)

 $\log_{10}(b)$  is called common logarithm.

In basic math:

$$\log(b) = \log_{10}(b).$$

#### VII Natural logarithm (自然對數)

 $\log_{\rho}(b)$  is called natural logarithm.

$$ln(b) = log_{\rho}(b)$$
.

In advanced math:

$$\log(b) = \log_e(b).$$

#### VIII Taylor expansion of natural exponential function

The Taylor expansion of  $e^x$  at x = 0 is

$$e^x = \sum_{n=0}^{\infty} \frac{x^n}{n!}.$$

#### IX Taylor expansion of natural logarithmic function

The Taylor expansion of ln(1 + x) at x = 0 is

$$\ln(1+x) = \sum_{n=1}^{\infty} (-1)^{n+1} \frac{x^n}{n}, \quad |x| < 1.$$

#### X Root (根號)

$$\sqrt[y]{w} := \begin{cases} w^{\frac{1}{y}}, & w \in \mathbb{R}_{>0} \land y \in \mathbb{N}, \\ -\sqrt[y]{-w}, & w \in \mathbb{R}_{<0} \land \frac{y+1}{2} \in \mathbb{N}, \\ 0, & w = 0 \land y \in \mathbb{N}. \end{cases}$$

#### XI Exponential function (指數函數)

 $f(x) = a^x$  where  $a \neq 0$  is called an exponential function with base a, of which domain is  $\mathbb{R}$  and range is  $\mathbb{R}_{>0}$ .

#### XII Scientific notation (科學記號)

Scientific notation refers to the representation of a real number in the form of  $a \times 10^n$ , where  $1 \le a < 10 \land n \in \mathbb{Z}$ .

# XIII Characteristic and mantissa (首數與尾數)

The integer part of a decimal is called the characteristic, and the remaining part is called the mantissa.

# XIV Exponential growth (指數成長)

Exponential growth usually refers to a functional that satisfies f'(x) = kf(x), where  $k \in \mathbb{R}$ , that is,  $f(x) = e^{kx} + c$ , where  $k, c \in \mathbb{R}$ .
